S.O.S.-Save Our Septic® - Bio-Microbics

Remediate with...RetroFAST®-PR (Prevention-Remediation) Program

Bio-Microbics announces the new S.O.S.-Save Our Septic® Prevention-Remediation Program; offering a MONEY-BACK warranty. Utilizing the EPA-tested RetroFAST® septic system enhancement to immediately improve a biologically failed drain field, the warranty offers homeowners peace of mind. The RetroFAST® remediates failures and extends the life of your septic system. The simple and dependable RetroFAST® is designed specifically for installation into any type of existing septic tanks. With minimal site disruption, the low cost, long-lasting solution reduces nitrogen by 50%. The fixed integrated treatment of the FAST® process produces high levels of Dissolved Oxygen (DO) promoting the growth of more efficient aerobic bacteria. The RetroFAST® helps retain a high ratio of aerobes and high level of treatment in the tank. Once the biomat has been diminished in the field, the soil will accept septic effluent without pooling and rejuvenate the field.

The RetroFAST® improves small onsite treatment systems to ensure a clean environment for future generations without the use of costly chemicals or additives. Don't just pump it – Fix it with RetroFAST®! For complete program details, locating a certified Bio-Microbics Distributor or RetroFAST® Installer please contact: 1-800-753-FAST (3278) or sales@biomicrobics.com. View Bio-Microbics website for further [S.O.S. Save Our Septic case studies and stories](#).

strength, flexible solution for septic system drainfield installations. Offering increased stability and superior strength through the chamber's center structural columns, the four-foot long Quick4 Plus High Capacity Chamber is easy to handle and install. Its Contour Swivel Connection™ provides advanced contouring capabilities for onsite septic system designs.

The entire Quick4 Plus chamber product line features the Quick4 Plus All-in-One Endcap, which can be used at the end of a chamber row or installed mid-trench to allow for a center feed with pipe connections at the sides, ends and top. Also available with the Quick4 Plus line is the Quick4 Plus All-in-One Periscope, allowing for raised, invert installations with 180° directional inletting. For information visit www.infiltratorsystems.com or call 800.221.4436.

SJE Rhombus® Enhances Design for Double Float® Master pump switch

SJE-Rhombus®, an industry leader providing quality pump control solutions for water and wastewater applications has enhanced the design of the Double Float® Master pump switch for use in a wider range of applications.

The new Double Float® Master mechanical pump switch has an enhanced pumping range of 3 to 48 inches (7.6 to 122 cm). Additionally, the new pump switch has an increased amp rating of 15 FLA at 120 VAC or 240 VAC. The Double Float® Master pump switch consists of two narrow-angle mechanical floats and a splice tube. The splice tube contains a holding relay which enables the floats to function in series. The holding relay eliminates pump chatter in turbulent conditions allowing the Double Float® Master pump switch to operate relay control panels for larger pump applications.

SJE-Rhombus, an industry-leading manufacturer of float switches, water/wastewater controls and pressure booster controls for the residential, commercial and industrial markets, sells its products globally through an extensive network of distributors and OEM's. To learn more about SJE-Rhombus, please contact SJE-Rhombus by: phone 888-DIAL-SJE (888-342-5753), e-mail sje@sjerhombus.com or visit www.sjerhombus.com.
