

total dissolved solids (TDS)

Measure of those solids that pass through the filter, and are then evaporated and dried at specified temperature. It should be noted that what is measured as total dissolved solids is comprised of colloidal and dissolved solids. Colloids are typically in the size range from 0.001 to 1 mm; typically expressed in mg/L.

total dissolved solids (TDS) images/graphics:

Total solids fractions

Description of different solids fractions: Volatile and fixed; dissolved and suspended

Total solids sources

Origin of solids fractions in the waste stream

Total solids fate

Fate of solids fractions in an onsite wastewater treatment system

Total solids and TSS

Which solids fractions constitute TSS
